

Summary:

Enterprise data and analytics leader with deep experience designing, scaling, and governing Tier 1 data platforms. Proven ability to translate strategy into durable architecture, lead global teams, and deliver measurable business impact through secure, cost-efficient analytics and AI-ready platforms.

Work Experience:

Director, Data Engineering & Quality – Cencora

December 2025 – Present

- Reorganized Client Analytics into a 4-squad structure. Responsibility expanded to 15 direct reports.
- Reduced division costs by \$290K with additional proposed savings of \$1.2M through contract terminations and software optimizations.
- Introduced Databricks Genie to business stakeholders through POCs and chartered an AI development playbook.

Senior Manager, Data Engineering – Cencora

January 2024 – November 2025

- Scaled a Tier 1 data platform 10x (10 to 100 users and 50 TB to 0.5 PB) while maintaining flat cost trajectory, enabling strategic growth without proportional spend.
- Defined and executed data product roadmaps with clear value propositions, enabling cross-functional alignment with Product, BI, Governance, and Data Science teams. Established a monthly Operational Review, raising visibility into Data Engineering performance, operational metrics, and strategic execution.
- Oversaw more than 300 data products and supporting infrastructure of data lake. Translated limited strategic input into a technical roadmap that enabled team-level execution that earned recognition for being forward-thinking.
- Responsible for ensuring operational continuity and risk management for BI, DE, DS, S&O, and Consulting during an emergency response as Business Resilience Manager for a global Business Unit.
- Managed \$2M+ budget. Delivered \$250K+ annualized cost avoidance through modernization and tagging strategies.
- Improved onboarding, eliminated single points of failure, and built a culture of shared ownership and data-driven continuous improvement near-ground-up with a global team of 12 that resulted in 80% fewer production incidents (from 21/mo to 4/mo) and 81% faster SLA breach resolution (from 9hrs to 1.6hrs).
- Improved development speed to value by 50% through CI/CD, automation, and standardization initiatives (3 weeks to 2 weeks). Similarly improved nightly ELT performance 50% by right-sizing compute and optimizing Delta tables.
- Directed an initiative to strengthen security and maintain zero-tolerance compliance of critical and high vulnerabilities over 30 days old. Resolved over 1,200 CVEs and strengthened the Azure secure score from 47% to 77%.
- Introduced Databricks Genie to business stakeholders through POCs and chartered a reusable playbook defining use case evaluation and development standards for AI.

Intermediate Data Engineer – Cencora

March 2022 – January 2024

- Owned and advocated for a modern data architecture supporting a 50 TB Data Lake.
- Improved a Kimball Data Warehouse with 73 dimensions, 21 facts, and 13 analytical datasets and its supporting infrastructure handling 100M transactions daily using Azure Data Factory, Databricks, Snowflake, Python, and SQL.
- Improved platform integrity and advocated for flexibility in deployment windows for common low risk requests to compliment agile development. Standardized deployment, maintenance, and auditing of 10 Snowflake environments.
- Designed a support escalation model and sequential onboarding curriculum for Data Engineering and Support and Operations; reducing technical debt by creating and promoting documentation for over 35 processes.
- Reduced department operational costs by \$323k through optimizations of compute and storage.

Data Analyst & Data Engineer – L3Harris Technologies

June 2019 – March 2022

- Led strategic projects for BI centralization and consolidating analytical capabilities in Azure and Snowflake.
- Enabled real-time reporting on over 250 reports, eliminated 50% of the lift-and-shift MRP ETL jobs, and reduced impact on the source system by 75% for estimated \$7,950 annual net savings using CDC and HVR.
- Organized 3 e3 Lean Six Sigma “Just Do It” projects resulting in over \$84,250 annual cost avoidance.
- Developed and maintained 240+ Cognos reports for 1200+ MRP users and supporting databases, views, stored procedures, ETL and data models across 5 environments in support of merger activity and an MRP upgrade.

Early Technical Experience, Data Analysis & IT Operations

June 2017 - August 2018

Education:

Rochester Institute of Technology (RIT)

B.S., *Cum Laude*, Management Information Systems

Skills:

Technical: SQL, Python, Databricks, Snowflake, Data Management, Azure Data Factory, ADLSv2, CDC, Replication, SSIS, Spark, Tableau, Cognos, Azure DevOps, Talend, SQL Server, PowerShell, VBA, Visual C#

Professional: Project Management, Strategic Planning, Emotional Intelligence, Public Speaking, Team Leadership, Conflict Resolution, Verbal and Written Communications, Coaching, Lean Six Sigma

Activities, Certifications and Memberships:

Databricks Certified Data Engineer Associate (142446770), Certified SAE 6 Agilist (2024), PMI CAPM #2990990 (2021 - 2024), Microsoft Azure Fundamentals (2020), Snowflake Data Engineer (2021), Lean Six Sigma Yellow Belt (2020), Eagle Scout (2013), Sigma Chi Fraternity (2014), Space Coast Crew Assistant Coach (2019, 2021)
